Subject: paging question
Posted by oxfordenergyservices on Thu, 04 Nov 2010 12:19:27 GMT

I have a routine that reads in a file, does some processing and moves
on to reading in the next file, for, say 1000 files.

the first time I run it it takes some time, then subsequently it takes
less time because the files are paged.

is there a way of unpaging the files so I can show what it looks like
realistically for timing reasons?

Thanks

Russ
