What about trying a catch error handler? Something like this:

```
pro blah
  CATCH, error_status
  IF ( error_status NE 0 ) THEN BEGIN
    CATCH, /CANCEL
    MESSAGE, !ERROR_STATE.MSG, /CONTINUE
    RETURN
  ENDIF
```

....do other stuff....

end

If an error occurs in the "....do other stuff...." section, the error message will get printed out control will return to the caller.

You can throw your own errors in the "....do other stuff...." section by doing something like

```
IF ( ...an error condition is detected... ) THEN $
  MESSAGE, 'this is my own error message', /NONAME, /NOPRINT
```

when you detect an error in your own code.

cheers,

paulv
