Hello,

I want to plot a 2D histogram with tvim with a black and white color table.

I want the pixels with no data to be plotted in white and pixels with the most data in black.

To do so, i type:

```
loadct,0  
reverse_ct  
tvim,map,/scale,nodata=0.0....
```

It plots my pixels with the wanted colors but the axis, labels and titles have disappeared (have been plotted in white i guess).

How to force tvim to plot the axis, titles in black but use the color table I want for the plot ?

If someone has an idea! :=)

Thanks!
