```

It works for me, too. But I have had the experience (enough times that I am doing all my important work in IDL 7.1) that IDL 8 just stops responding to me. It's happy enough to accept my commands at the command line. It's just that nothing ever happens! There is no way I've found to get it out of this funk except to exit IDL and try again. It seems like this happens every 10 minutes, but it's probably no more than 5-6 times a day.

Cheers,

David
