Hi all.

I'm having a problem with creating postscript plots of multiple pages.

My code looks like this:

```
-----  
pro plotexample, n  
  
compile_opt idl2  
  
set_plot, 'ps'  
!p.multi=[0,1,3]  
device, filename='example.ps'  
  
for i = 0,n do begin  
    plot, [0,1],[0,1]  
    plot, [0,1],[0,1]  
    plot, [0,1],[0,1]  
endfor  
  
set_plot, 'x'  
!p.multi = 0  
  
end  
-----
```

If n is too low (lt 29) it never produces a readable .ps file. If n is higher it doesn't include all pages (or for that matter all subplots on the last page). Sometimes the last window drawn don't contain any data -- at other times it only draws the horizontal axes.

I'm really lost as to why this is happening.

Regards,  
Soeren
