Hello,

some people of this group warned me to use  
the IDL option:

```
EXECUTE("???")
```

It will mess up the memory-management of IDL  
after a while they estimated...

But this option is wunderfull for dynamical  
management of data-array!!

```
EXECUTE(name_of_array+"=findgen("+string(dim_of_array)+") ")
```

shall I use execute or not?

any hints?

Hendrik
