Subject: X window error
Posted by jtmcahill on Sun, 28 Nov 2010 05:08:12 GMT

Hello,

I keep getting an X windows badmatch error when trying to write a png
file. It's worked perfectly fine on other computers but apparently
something is different about the environment on my current computer.

```
if keyword_set(png_file) then begin
    wset, 0 & rgbSnapshot = tvrd(TRUE=1)
    write_png, png_file, rgbSnapshot
endif
```

Does anyone have any thoughts?

Thanks!
