I'm trying to get the pixel values (color) from a GeoTIFF file when I have lat,lon arrays. I have the projection set up using MAP\_PROJ\_INIT, and using MAP\_PROJ\_FORWARD I can convert from my latitude and longitude to map coordinates, but the map coordinates appear to be in units meter from some reference location. What is the best routine to convert from lat,lon (or u,v) to x,y indices?

Thanks,

-k.
