Hello,

i want to play with IDL Variable names.....Look:

```
...  
...  
...  
a=10  
b="a"  
c=print,MAGIC("b")  
if c eq 10 then print," its magic!"  
...  
...  
...
```

So: How to programm this function MAGIC????

Is there perhaps a workarround with call_external
and defining some IDL-variable-names in the C-code
and as the result we get the wantet variable???

any hint needed....

Hendrik
