Hi,

I'm looking for the system variable that gives you the name of the current device. I'm not in my office where I have a handy book telling me how to get it and it has been a while since I've used it. Thanks.

Also, is the current IDL documentation somewhere online that can be accessed without using IDL? I currently use the pages hosted at idlastro but that is only for IDL 6.4.

Thanks,
Ryan.
