
Subject: [Q] removing undefined variables automatically/rename

Hello,

does anybody know if there's a handy routine for deleting undefined variables in IDL? Occasionally lots of them are setup accidentally and it's annoying to have deleting individually. Does anyone have a suggestion for dealing with this?

Also, does anyone know if it's possible to rename a variable? If you have a large array is can be tricky doing

```
a = temporary(b)
delvar,b
```

Any suggestions?

Thanks,

Iarla.
