Is there anyone who can help me create, within PVWAVE, political or latitude/longitude boundaries behind, above, or under the displayed data? The particular area of interest includes all of the US and is defined by the four corner points: 44N, 144W; 65N, 45W; 13N, 109W; and 20N, 69W.

Also, I'm interested in performing a thorough statistical analysis in matching up two different cloud grids. Are there any routines out there which would be helpful in performing and displaying them?

Thanks

Ed Harris
