Subject: Re: PVWAVE political or lat/lon boundaries& statistics?
Posted by eharris on Tue, 05 Nov 1996 08:00:00 GMT

Is there anyone who can help me create, within PVWAVE, political or
latitude/longitude boundaries behind, above, or under the displayed data?
The particular area of interest includes all of the US and is defined by the
four corner points: 44N, 144W; 65N, 45W; 13N, 109W; and 20N, 69W.

Also, I'm interested in performing a thorough statistical analysis in matching
up two different cloud grids. Are there any routines out there which would be
helpful in performing and displaying them?

Thanks

Ed Harris
