RSI was founded in 1977, as mentioned by Ali Bahrami of RSI (Boulder, CO). David Stern is your man for IDL (and later PV~WAVE -- see other articles for the details of how this came about), and the roots were at the University of Colorado.

Here are a few words from the old NCAR Graphics Version 2.00 User's Guide:

The NCAR graphics package dates from the mid-1960s. The initial impetus for the package was to produce a set of plotting tools to support NCAR scientists in their research. Most of the code has been written by the staff of the Scientific Computing Division of NCAR ...

As mentioned by Ray Bovet of NCAR (also in Boulder), Tom Wright was the principal creator of NCAR Graphics.

Hope this helps,

Rob
