Thanks. My personal preference is for direct graphics to look like function graphics (black on white background with thicker and larger lines and characters), especially since I am currently spending about half my time with each graphics system. But if I am going to drop-in replace PLOT with FSC_PLOT in legacy programs, then I would use the /TRADITIONAL keyword. I have found that otherwise FSC_PLOT can introduce conflicts with program that for example assume a default color of !D.TABLE_SIZE-1.
