Hi,

Does anyone knows how I can set a widget button size or the text font size in a widget button ?

My program is as follows:

```
;MAIN WIDGET BASE
```

```
base = WIDGET_BASE(TITLE='Gprofview',xsize = wx, ysize = wy, /COLUMN)
```

```
pad = WIDGET_BASE(base, /FRAME, /ROW)
```

```
;The DISPLAY button:
```

```
disp = WIDGET_BUTTON(pad, VALUE = '  Display  ', UVALUE = 'DISP')
```

```
;The DISPLAY NEXT button:
```

```
dispnext = WIDGET_BUTTON(pad, VALUE = '  Display Next  ', UVALUE =  
'DISPNEXT')
```

```
;The EXIX button:
```

```
exit = WIDGET_BUTTON(pad, VALUE = '  Exit  ', UVALUE = 'EXIT')
```

```
; The HELP button:
```

```
help = WIDGET_BUTTON(pad, VALUE = '  Help  ', UVALUE = 'HELP')
```

The four buttons (display, display next, exit, and help) are supposed to fill in the widget base 'pad'. But they are overlaid sometimes and filled only half xsize sometimes, depending on the terminal which I am using. I also found that the text fonts (and its size) in the widget window vary with terminal. Any clues?

Thanks.
