
Subject: IDL8.0 Workspace compile errors

Hi all,

I am using the 8.0 workspace on Mac OS X. When I build a project, I get little red X's on the names of files where I've goofed, and red bars in the editor window margin. Nice, because I sometimes goof. When I fix my mistakes, and build again, all the red X's persist, as well as the red bars. Forever.

.RESET_SESSION does not clear these markers, BTW.

Gotta be something I'm doing wrong, because I see nothing about this issue on this group or the whole big 'net.

Can anyone help? Or should I retreat immediately back to the sanity of 7.1?

Erik
