Yikes! Don't do something like this. Set *either* the !P.MULTI
system variable *OR* position each plot with the POSITION
keyword, but *don't* do BOTH. You will get some very
confusing results if you do.

And by the way, if you want portable code, I wouldn't be
doing this in DEVICE coordinates. I'd do it in NORMAL
coordiates. Then you don't have to write special code
for PostScript and for your display.
