Norbert -

Aha, I bet that is what's covered by the preamble in the output file:

```
%!PS-Adobe-3.0 EPSF-3.0
```

I tried including my new graphic in my LaTeX master document without change and it does indeed work just fine. I learned postscript pretty well back in the early 90's and haven't bothered to update my manuals or my knowledge. Sounds like PS and EPS are pretty much redundant names for the same thing now days.

Thanks,
Marc
