Subject: fitting with asymmetric errors?
Posted by Elizabeth on Fri, 07 Jan 2011 16:46:47 GMT

Hi all,
I'm trying to fit a curve to a data set with asymmetric errors. I
usually use mpfitexpr when fitting, but cannot see a way to input
anything other than symmetric errors (though this is could well be a
problem with my understanding rather than the routine!). If mpfitexpr
is not the task for the job, is there another routine you would
suggest?

Thank you very much for your time! :)
 Liz
