I get the same result.

```
IDL> print,!version
{ x86_64 darwin unix Mac OS X 7.1.1 Aug 19 2009    64    64}
IDL> plot,sin(findgen(30)*0.135)
IDL> window,1
IDL> plot,cos(findgen(30)*0.135)
IDL> wset,-1
IDL> xyouts,0.5,0.5,'Dada',/Normal ; appears in window 1
IDL> wset,-2
% WSET: Window is closed and unavailable.
% Execution halted at: $MAIN$
```
