Folks,

All this talk about TVIMAGE this morning got me thinking that maybe *all* the Coyote Graphics commands could use this easy approach to adding graphics commands to an FSC_Window resizeable graphics window. So I added a ADDCMD keyword to FSC_Plot, FSC_Contour, FSC_Surf, and Histoplot.

This makes it possible to do something like this.

```
FSC_Window, WMULTI=[0,2,2] ; Set up 2x2 multiplot
FSC_Plot, LoadData(17), /ADDCMD
FSC_Contour, LoadData(18), /ADDCMD
FSC_Surf, LoadData(2), /ADDCMD
Histoplot, LoadData(7), /FILL, /ADDCMD
```

Four different plots in a resizeable graphics window that can make a PostScript file and save its contents in beautiful raster files. My God, you have GOT to love that! :-)

Update your Coyote Library:
