image in one of your new resizable windows? The equivalent of TVSCL, image?

You can use:

   TVImage, image, ..., /Scale

Or,

   TVScale, image, ...

TVScale is just a simple wrapper that calls TVImage
with the SCALE keyword set.

This reminds me, though, that I haven't added a WINDOW
keyword to TVImage to send it directly to an FSC_Window
application. I'll do that now. At the moment, you will
have to add this to FSC_Window like this:

   FSC_Window, 'TVImage', image, /Scale, /ADDCMD

Cheers,

David
