One huge advantage, I just thought of, is that if I rename TVImage to cglImage I can make it do nearest neighbor interpolation by default. Making TVImage interpolate by default was one of the biggest programming blunders I ever made. Right behind the EUROPEAN keyword, probably. :-)

Cheers,

David

P.S. Who knew in 1996 that satellite data was going to be so important and that remote sensing types were going to be SO picky about their precious pixels? ;-)
