Hi Chris,

Congratulations on a good job. However, I just downloaded and attempted to use the new version, but my xemacs 19.11, which is the latest supported version for ULTRIX, gives an error for the easy-menu-add function. So, Xemacs is unable to load the mode. Could you email or post a method to get rid of the easy-menu-add feature ? I can do very well without the idl menu, but I really like the indentation and color support in Xemacs.

Thanks.

Santanu
