I like the lowercase "cg" prefix. Fits better with what is becoming an IDL naming idiom. (Just to be clear, that last letter is an "m", i.e. em :o)

This renaming I also think would be good. Mostly because amongst all the "FSC_" (or "cg") examples you've posted, "TVImage" stood out.

BTW, the URL for your 3 January 2011 update is incorrect. It states:

```
svn co http://idl-coyote.googlecode.com/svn/tags/coyote_code_releas e_2_201101032 local_dir
```

but should be

```
svn co http://idl-coyote.googlecode.com/svn/tags/coyote_code_releas e_2_20110103 local_dir
```

(there's a "2" on the end.)

When's the Feb update tag gonna be available....?
