Subject: yfit in linfit showing up as float [] filled with NANs Posted by Meredith Pind on Thu, 10 Feb 2011 02:18:24 GMT

Hi all,

I'm having some trouble with this one plot. I am using the same code for two other plots and it is working properly, and it had previously worked for this plot but suddenly stopped. I am finding that the yfit variable is turning up as a float that is the same size as my x and y values but it is filled with NANs. I don't understand why it is working for the other two plots but not this one. Any ideas why this might be?

Thanks,

Meredith

```
p11 = plot(netQn, Qcalc, $
    sym_index = 4, $
    linestyle = 6, $
    title = 'Figure 4: Measured Net Radiation vs. Calculated Net Radiation', $
    xtitle = 'Qn (W/m2)', $
    ytitle = 'Qcalc (W/m2)')

; display line of best fit bestfit = linfit(netQn, Qcalc, yfit=yfit)
p12 = plot(netQn, yfit, thick = 2, /overplot)
```
