Hi David

if you wish later to convert your html to moinmoin wiki markup I
probably can help with that.

If you yet want to change the url only then an editor with regex
capability and able to open all files at once should be able to do it too.

I never tried idl's regex, but may be it can be used for something like
this too

 http://stackoverflow.com/questions/490597/regex-replace-in-p ython-a-more-simple-way
