Yes, is that unusual. :-)

Maybe someday soon I'll have enough leisure time to make lists, but at the moment I'm going all out to get this book ready for publication. There are just so many things to think about, that I need brain expansion modules.

At the top of my list are more typos! (*Very* hard to pull the trigger when you are terrified of looking the fool on the very first page!) Keep them coming. And those of you who have purchased books already (THANK YOU!) can exchange your riddled copy for a clean one. (Assuming I can make one, eventually.)

Anyway, getting closer and closer. I think I've decided on a printer. I have only to see some of his books to assure myself the books won't fall apart as soon as they are opened. Quality is important to me, as I'm sure it is to you, too.

The pre-publication sale on the book will be over shortly. Maybe through the end of the week, when I really start to advertise the book. So far, only readers of the newsgroup know about it, but I figure I owe you folks.

I've found a couple of code problems today, and I've added a couple of features, so look for new code by the end of the day.

Cheers,

David

P.S. To answer Paul's question--I think that why I start to write--I would *like* to use that Wiki repository more. Just have to find some time to do it. And, yes, I would like to have a LOT more collaborators. My plans for Coyote Graphics 2.0 will

require a few of us. :-)
