Whoops! Same problem as this morning. In cgTEXT, line 175,
when calling cgWINDOW, the _REF_EXTRA=extra call *has* be set to
_EXTRA=extra. Otherwise, extra keywords cannot be recognized
by CALL_PROCEDURE.

I've made the change here, and I'll check the rest of my
routines to be sure I've found it everywhere. Update later
today, with new programmable ability to make raster files
from cgWindow, complements of Jeremy, who had this done
in about 15 minutes!

Cheers,

David
