Apologies up-front for the stupid question
but somewhere in my IDL/PVwave travels I have
come across a simple plotting tool for XY
plots with labels etc that seemed to be good
for those quick plots that are sometimes needed.

However this was some months ago & I can't
remember where I found it...I can't recall
if it was Wave or IDL, official lib or a user
file.

If someone could suggest what routine I was
looking at I would be v. happy. thanks

Craig
