```

Ah yes, that's clearly a better option. :-)= Lots of nice little tricks within CG still to learn...

Speaking of which, I've got another odd issue with the aspect ratio of output. If I output a postscript file, I get the wrong aspect ratio, but if I out a .png file via ImageMagick, I get the right aspect ratio. Even weirder is that if I set ps_delete=0, the intermediate postscript file has the *right* aspect ratio. I've looked at the code in both sections, and I can't see any difference that could account for it... and if I try to manually run the commands that create the ImageMagicked .png file, I get the wrong aspect ratio!

So I'm befuddled. :-)=

```
{ x86_64 darwin unix Mac OS X 7.0.4 Sep 3 2008    64    64}
```
