Dear idl users,

I am looking for a way to select and deselect plotting windows, going back and forth between them.

I mean I would like to

```
select <window 0>
```

```
plot, x1, y1
```

and then

```
select <window 1>
```

```
plot, t, s
```

and then again

```
select <window 0>
```

```
oplot, x2, y2
```

How do I do this? I remember I read something like that a while ago, but now I cannot find it anymore...

Many thanks to anybody would like to reply me
