READ_JPEG and READ_PNG are not writing in IDL but are DLMS which should be automatically linked when starting IDL. (Actually there is a file read_png.pro but it is obsolete, and only used to call READ_PNG as a procedure rather than a function. That is why you got my favorite headscratching IDL error message:

```
% Compiled module: READ_PNG.  
% Attempt to call undefined procedure/function: 'READ_PNG'.
```

Unfortunatly, I'm not sure why you aren't automatically linking to the DLMS. You might tell us your IDL version and machine. Also, is it possible you are using a different IDL version now?
