Just tip for anyone who might fall into the same trap. If you compile (and distribute) a 64-bit IDL DLM with MS Visual C++ 2010, the user, if he or she doesn't have the same compiler installed, will have to install the MS Visual C++ 2010 Redistributable Package (x64). Probably self-evident for the initiated, but ITT VIS support (and two users) had to track the problem down for me.

Cheers,

Mort
