Hi there,

I'm using David Fanning's VColorbar\_\_define.pro under IDL 8.0 and it ain't working....

It works fine under 7.1 .....I'm wondering if there is a problem or if the problem is me ;o)

```
thisColorBar = Obj_New('VColorBar')
thisModel->Add,thisColorBar
```

gives me:

```
'Attempt to call undefined method Vcolorbar::position'
```

I do have a large viewport defined.... but no idea whether this would cause a problem.....

```
thisView = OBJ_NEW('IDLgrView', Color=[80,80,80],
Viewplane_Rect=[0.,0.,1440.,900.],zclip=[20.,-10.]
```

...and like I say, works fine with 7.1

Any ideas ?

Cheers

George.
