I don't know a way to change the color picker per se,  
but I've never liked it either. In the property sheets  
I use in the Catalyst Library, I use my old friend  
PickColorName.

You can see this, for example, if you run the program  
AnnotateWindow, create an annotation, then select the  
annotation and right click to see its properties. Choose  
Color or Background and you will see my color picker.

Cheers,

David
