---

I only recently migrated to IDL8, and have noticed that calls to dialog\_pickfile immediately crash my session if I have more than one instance of IDLDE running (I have one instance running something fairly substantial, and wanted to work on something else in the second instance). I'm on Linux/CentOS5, using IDL 8.0.1. Has anyone else run into this? Seems like a bug to me, since in older versions this wasn't a problem.
