
Subject: Finding ImageMagick on a Mac

Folks,

Several people have reported to me that after installing ImageMagick on their Macintosh computers, the Coyote Graphics routines were not able to find it. Apparently, the way the Macs handle environment variables is different from other computers.

Several people have managed to solve the problem and reported back to me. Most of the time I don't have a clue what they are talking about. That doesn't stop me from writing about it though. :-)

I've put together some notes from a couple of these reports. I'm pretty sure I am not doing the situation justice. Could someone with a Mac look this over and give me some constructive criticism, please?

http://www.idlcoyote.com/cg_tips/findimonmac.php

I would be most appreciative.

Cheers,

David
