Thank you for your solutions.

Since this is for a journal, I will keep the Latex solution without merging. For pdfTeX:

```
epstopdf fig_a.eps  
epstopdf fig_b.eps
```

to create the pdfs I will use and in the latex file:

```
\begin{figure}  
\vspace*{2mm}  
\center\includegraphics[width=120mm]{fig_a}  
\center\includegraphics[width=120mm]{fig_b}  
\end{figure}
```

It would still be interesting to do ps merging automatically without losing quality!

Thanks  
Fab
