
Subject: Is COLOR enabled on the Postscript device?
Posted by [Patrick Broos](#) on Mon, 09 Dec 1996 08:00:00 GMT

As you know, the Postscript device can be configured to produce color Postscript output using the DEVICE, /COLOR command. A *human* can determine if color is enabled using HELP, /DEV. Does anyone know how a *program* to determine if color is enabled?

None of the system variables seems to report this. Bit 4 of !D.FLAGS does NOT work.

Many thanks to anyone who can help me with this!

Regards, Patrick Broos
