Hi

I just wanted to share how I had added mercurial to the idlde environment of 8.0.1 for linux

copy of
com.vectrace.MercurialEclipse_1.7.1.v201012101420.jar

to
/usr/local/itt/idl/idl/idlde/plugins

and

copy of
mercurialeclipse_1.7.1.v201012101420

to
/usr/local/itt/idl/idl/idlde/features

I used the same files as I got by using
Eclipse SDK

Version: 3.5.2

Build id: M20100211-1343

Reimar
