Subject: CLUSTER of atmospheric trajectories Posted by Chicho on Fri, 18 Mar 2011 08:28:50 GMT

We are working with atmospheric trajectories at 500mm height. We have 1500 trajectories (Time, latitute and longitude) and we would like to use the cluster analysis to evaluate the centroides of that. We know the CLUST_WTS function but I don't understand what is the format of the input file. Could anyone help us? Thanks in advance.
