Subject: 3D trajectories over maps

Hi all,

I would like to plot the trajectory of a satellite over the earth globe.  
I have the ground-projected longitude and latitude as well as its  
altitude. How to plot that trajectory around an orthographic map?  
'plots' doesn't seem to do that. It works only for trajectories  
projected on the surface of the Earth.  
Is there a trick? Did someone already face that problem?

Thanks
