Hi,

I installed IDL8.0 on the same machine where I have idl71.

Now I can't launch IDL from the terminal using the command "idlde" and, what is worst, I receive messages like

Compiled module: ...

Not a legal system variable: !P0.

Hence I can not run any more some routines.

It seems that the startup file is not read correctly and it looks for the command "idlde" in the wrong place.

What should I do? Thanks in advance.
