## Subject: Command line display format Posted by Ammar Yusuf on Wed, 04 May 2011 18:56:11 GMT View Forum Message <> Reply to Message

Hi, so I did this in the command line:

IDL> print, wave\_special[2], wave\_special[1], wave\_special[2]-

wave\_special[1] 1260.20 1260.10 0.0999756

I was hoping it would print out 0.10 but it's something really close. How can I display in my command line the actual values of wave\_special. I know in Matlab you can type format short, format long, to do it.

Is using the print format the only way to see? Thanks!
