Have you seen the Princess Bride? I'm not sure you are
using the word "extensive" properly. I think you mean "any". :-)

OK, so I choose "Subversion. It asks me if I want to "install"
something or other and I say "Yes". It gives me a list of things
I *could* install, but no help making a choice. I cancel out of that,
so I can think a little bit and do some research. Now, when I do
Window->Source Control Tools -> Subversion nothing whatsoever
happens! :-(

What do I do now?

Cheers,

David
