Steve Penton from RSI has kindly sent me an updated GAUSSFIT which supports the NTERMS keyword.

I had a brief scout in RSI's anon FTP area, but couldn't find the update there. Still, I'm sure that RSI will send it to any IDL users who want it. Also, considering that all the userlib routines are freely available (as part of a demo IDL installation), I've taken the liberty of putting the updated gaussfit.pro on our anon FTP site here.
