Subject: PV-Wave widget question
Posted by rkj on Thu, 05 Dec 1996 08:00:00 GMT

Is there a way to change the width of a file selection
widget? I have tried modifying the Motif resource with
WtSet but it seems to ignore it. I am able to change other
resources (i.e. colors,callbacks,etc.) but it will not allow
me to modify the width (or height) resource.

I like to create widgets with Ww commands and modify them
with WtSet, if the defaults are not exactly what I want.

Here is my code:

```
file = WwFileSelection(wid,'GetFilenameOK','CancelFileCB')
args={,width:500,noResize:1}
status = WtSet(file,args)
```

The noResize resource is set properly but the width is not.

There ought to be keywords for width and height associated with
WwFileSelection, and then I would not have to deal with Wt
at all.

Any suggestions?
