
Subject: Determining which license is being used.

I've recently had some trouble running IDL in CGI environment and one of the areas I'd like to explore is what's going on with the license. I can't log into the environment myself, but I can change the script that is run. I was hoping to get the IDL session to report which license it is using, but I couldn't see anything that provides that information. Is there some system variable or function I could use?

Thanks,
Tom McGlynn
